RETAIL SERVICES FORECAST REPORT

Integrating tourism and lifestyle, Bali's shopping centers remain on a growth trajectory

Annually | Bali | January 2026

Insights & recommendations

Occupancy rates have maintained a healthy trajectory, supported by sustained tenant demand and a recovery in tourist traffic, particularly at lifestyle-driven and destination-oriented shopping malls. Demand has been largely driven by experiential retail, with strong interest from food and beverage, fashion, and entertainment brands aligned with travel and leisure. This trend is expected to encourage retailers and mall owners to continue focusing on in-demand concepts while curate tenancy mix that align with Bali's tourism-led demand profile.

Mall owners remain to prioritize long-term occupancy and tenant sustainability over adjusting occupancy cost. Some malls may adopt flexible lease structures to accommodate brand growth and varying performance levels. Wise calculations are also needed to maintain facility standards while contributing to increased visitor numbers and a better overall shopping experience.

		2025 vs 2024	2025 vs Avg. 2026 - 2028
Demand	Food & beverage and fashion retailers remain the primary crowd pullers in Bali's shopping malls, driving tenant expansion and supporting stronger space absorption as new tenants progressively occupy available spaces.	4.9% ↓ 13,464 m²	4.0% ↓ 11,526 m²
Supply	Limited retail formats with a lifestyle- and experience-oriented focus are expected to be main contributors to retail supply through 2028.	0% ↔ 0 m²	3.0% ↑ 10,333 m²
Rent	Rental rates are expected to record mild upward adjustments, particularly in prime, well-performing, tourism-driven retail malls.	0.1% ↑ IDR 457,193	2.7% ↑ IDR 495,701
Vacancy	The addition of new supply is not expected to impact vacancy rates, which will continue to decline up to 2028, albeit at a slower pace than in previous years.	-3.9% ↓ 16.9%	-1.7% ↓ 14.5%
Service Charge	Service charges are forecast to remain relatively stable, in line with gradual operational cost adjustments and inflation.	2.5% ↑ IDR 138,108	3.0% ↑ IDR 150,914

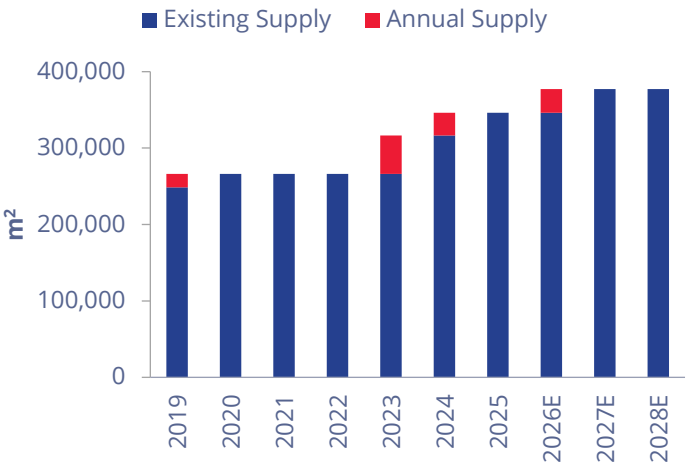
Future projects: tourism-oriented and semi-open retail concepts in focus

With no new mall developments recorded in 2025, cumulative supply remains at around 340,000 m². Physically, Bali's retail landscape is characterized by a diverse range of formats, reflecting both resident lifestyles and visitor preferences. The market comprises conventional indoor malls catering to everyday and family-oriented needs, alongside semi-outdoor lifestyle malls and open-air retail concepts closely integrated with tourism, culinary, and recreational activities. This balanced distribution allows the retail supply to remain relevant to various consumer segments, from residents to domestic and international visitors.

Cumulative supply



Source: Colliers

Retail development in Bali continues to focus on capturing demand in tourism-driven core areas. A new premium outdoor retail outlet is currently under construction and is projected to add approximately 31,000 m² to Bali's cumulative retail supply in 2026. The development is expected to expand and enrich the existing shopping mall, reinforcing Bali's retail offering without disrupting the performance of established malls.

Retailers expansion continues; with lifestyle demand driving tenant mix

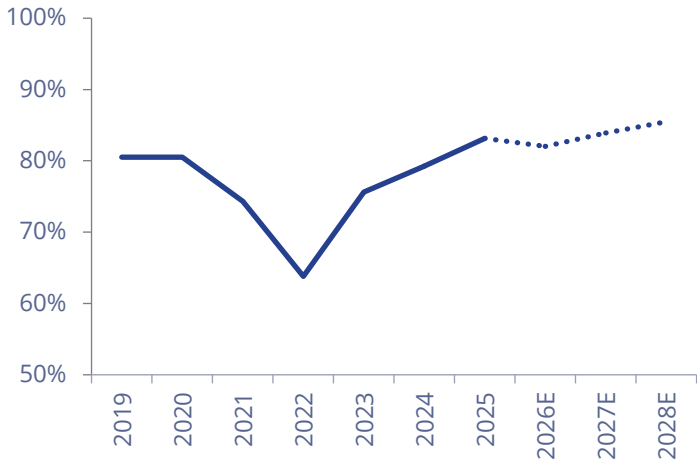
Retailers continue to benefit from Bali's strong position as a global tourism and lifestyle destination. Shopping in Bali is not merely transactional, but is closely intertwined with the tourism experience, daily lifestyle patterns, and experiential consumption. This creates a resilient demand base supported by both visitors and residents.

Bali's retail market offers a highly diverse shopping environment, encompassing traditional craft markets, curated lifestyle malls, and vibrant outdoor retail destinations. Reflecting the island's tourism-led characteristics, key tourist-oriented shopping centers are positioned to accommodate fashion, culinary, and leisure-focused concepts. In contrast, while downtown malls tend to focus on attracting value-conscious shoppers through from a more urban retail setting. This diversity allows Bali's retail market to cater to a wide range of consumer profiles, budgets, and shopping habits.

Bali's retail landscape continues to be enriched by a balanced mix of high-end and mid-range international fashion and food & beverage brands, alongside locally rooted concepts offering Balinese traditional attire, handcrafted accessories, organic skincare, and surf-related products. This mix strengthens Bali's retail appeal, encourages repeat visits, and supports longer stays, with demand remaining strong, particularly from tenants with authentic foods, lifestyle-oriented brands, and experiential retail concepts that resonate with Bali's leisure-oriented market.

Additionally, retailer activity is increasingly supported by brand activations, including promotional events and pop-up stores, which are actively hosted within shopping malls. These initiatives allow established and emerging brands to test the market, increase visibility, and engage directly with consumers. Toward the end of 2025, major retail centers also intensified promotional campaign and large-scale sales programs, further boosting foot traffic across Bali's mall network.

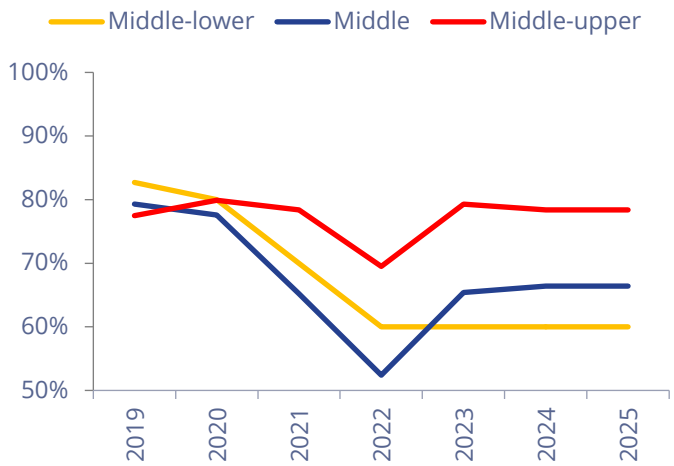
Occupancy



Source: Colliers

In line with the vibrant market activity, average occupancy in Bali reached 83% in 2025, marking an improvement of around 3% compared with the end of 2024. Occupancy growth has been supported by sustained tenant interest, new store openings, and new-to-market entrants seeking exposure to Bali's established retail ecosystem. With demand continuing to be underpinned by tourism and lifestyle-driven shoppers, Bali's retail market remains well positioned to maintain healthy occupancy levels in 2026, supported by its diverse offerings and strong experiential appeal.

Occupancy by mall grade



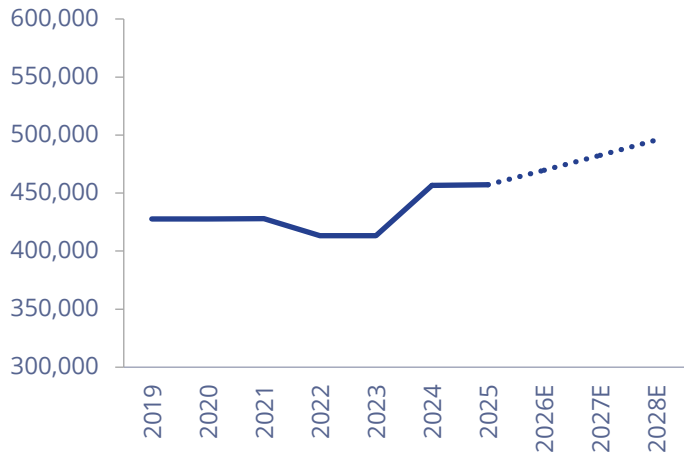
Source: Colliers

Supported by healthy demand, select malls premium occupancy costs

Unlike purely urban malls such as those in Jakarta, shopping malls in Bali are strongly influenced by tourism intensity, visitor spending patterns, and the performance of experiential retail concepts that function as destinations, which in turn shape rental rate levels across Bali. As a result, rental rates in Bali vary by asset and are largely determined by mall quality, existing operational performance, and the overall shopping environment created by each retail destination.

Rental rates in Bali also differ noticeably by mall grade. Middle-Upper grade malls typically command average rents of around IDR 560,000, which evidently supported by stronger foot traffic, and a highly sought-after mall atmosphere. Middle grade malls record lower average rents at approximately IDR 400,000, while middle-lower class malls are generally priced below this level, with average rates hovering around IDR 210,000, which target to more local-oriented retailers.

Average asking rental rate (IDR/m²/month)

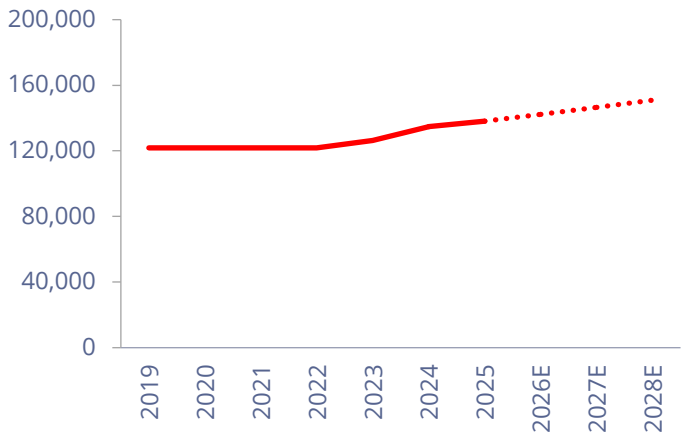


Source: Colliers

Overall, average retail rents in Bali remain below Jakarta levels. While Jakarta's average asking rental rate are supported by the presence of Premium and several Middle Upper grade malls and full year domestic consumer base, Bali benefits from a tighter and more segmented retail supply that helps sustain healthy average occupancy. Importantly, Bali's retail market is closely aligned with the tourism economy, and with visitor arrivals expected to continue improving, shopping-related spending is likely to strengthen further. This expected to position Bali's retail sector positively, as limited supply combined with rising tourist-driven demand provides a solid foundation for stable occupancy and gradual rental upside over the medium term.

By the end of 2025, the overall average rental rate across Bali's mall market stood at around IDR 450,000, reflecting the strong contribution of well-occupied, destination-led malls. Over the forecast period, rental rates are expected to increase around 4% annually through 2028, driven primarily by consistently high-performing malls that continue to attract solid tenant demand.

Service charge (IDR/m²/month)



Source: Colliers

Meanwhile, service charge also remains a key consideration for tenants in Bali. By the end of 2025, the average service charge is estimated at nearly IDR 140,000, generally lower than Jakarta's average. This difference is primarily driven by different regional wage levels as well as mall formats. In Bali, the

relatively high presence of semi-outdoor shopping center format allows mall owners to offer more competitive service charges while maintaining service quality and visitor comfort, alongside a number of fully enclosed indoor malls. In contrast, Jakarta's retail landscape is largely dominated by fully enclosed indoor malls, which typically incur higher operational expenses, particularly for air-conditioning, and overall energy consumption. Additionally, average service charge in Bali is forecasted to increase around 2%-3% each year.

Beyond traditional malls: shopping streets gain momentum

Other than shopping malls and standalones, shopping streets have emerged as an increasingly important retail format in Bali, serving as a key platform for both local businesses and selected national brands seeking direct access to the consumer and tourist markets. This format particularly accommodates local entrepreneurs and independent retailers, offering a more flexible and accessible entry point compared to mall-based retail, while still allowing them to tap into Bali's strong tourist-driven spending environment.

One of key advantages of shopping street retail lies in its high visibility and accessibility. Typically developed in simple shophouse formats along major roads, these retail strips benefit from strong exposure to passing traffic, enhancing walk-in potential and impulse visits. For food & beverage retailers, being directly fronting main roads often translates into stronger brand visibility and higher customer engagement compared to locations within enclosed malls. As a result, several F&B and selected national brands have increasingly opted for shopping street locations as part of their expansion strategy in Bali.
